

LabVIEW Part 4: TE Competition

November 4, 2008

www.robjackets.org

TE Final Competition

- This Saturday at 10am in the MARC (Bldg No. 129)
 - 813 Ferst Drive NW
- Rules are on the wiki
- Objective is to move cups out of an arena
- Moving special blue cups scores bonus points
- We will cover strategies today

RoboJackets

Robot

- You will be given a light sensor
 - Use it to detect the boundary of arena
- Also have sonar for detecting cups
- You should build the diff drive basic robot with one change
- There are better designs though

RoboJackets

Strategy One: Detect Lines

- Use light sensor to find boundary by examining its value
- If its low then we have a line
- Try turning on the light for the sensor
- Once a line is found implement an avoid behavior
 - Back up and turn around

RoboJackets

Strategy Two: Detect Cups

- Periodically read sonar. Valid values imply object is near
- Once you find an object go towards it
- Search for objects by moving around
- Be sure to lock-on to cups once found

RoboJackets

Strategy Three: Finding the Blue Cup

- Use light sensor again to inspect light value of cup
- The close to white implies its likely blue
- Now use a smart algorithm to move towards green zone
- Will have to use odometry
